

Richard Dean

Full-Stack Developer

[linkedin.com/in/richard-d-9327452](https://www.linkedin.com/in/richard-d-9327452) | github.com/agentred1999 | 281-832-6509 | redhat1999@mailfence.com | Houston, TX | agentred1999.github.io/portfolio

Full-stack developer with over a year of hands-on experience shipping React and TypeScript applications, and recent experience designing, deploying, and hardening a self-hosted production backend end-to-end — from reverse proxy and TLS through database security and process supervision. I care deeply about performance, clean code, and building things people actually want to use.

Professional Experience

Skinstric AI Frontend Engineer | Remote | July 2026 - July 2026

- Built a full-flow Next.js and TypeScript replication of the Skinstric skincare-AI web application, covering onboarding, camera-based scan capture, permissions handling, and results presentation across six connected routes.
- Diagnosed and resolved a set of production issues including SVG animation rendering failures, CDN caching bugs, and broken third-party badge services, restoring full functionality without disrupting the live deployment.
- Deployed and iterated on the application using Vercel, managing a live production URL through multiple rounds of debugging and feature updates.

Frontend Simplified Frontend Developer | Remote | May 2026 - August 2026

- Implemented Firebase Authentication supporting email/password sign-up, Google OAuth, and guest access, and wired global state with Redux Toolkit to manage user session and library data.
- Designed a tiered subscription-access system (guest vs. Google-authenticated users) that gated premium content and audio playback, resolving edge cases in access logic via a centralized subscription-resolution function.
- Practiced professional Git workflows, independently applying and testing shell-script-based deployment patches and pushing changes via the command line.

Projects (Personal)

1337 Wing — Full-Stack E-Commerce Platform & Self-Hosted Infrastructure

agentred1999.github.io/1337-Wing | github.com/agentred1999/1337-Wing

- Designed and built a full-stack cybersecurity-brand e-commerce platform: React/Vite frontend, Node.js/Express REST API, and PostgreSQL database, integrating a live Hacker News API feed for real-time industry content.
- Architected and deployed the production backend on self-hosted infrastructure (Raspberry Pi 5), configuring Caddy as a reverse proxy with automatic TLS certificate issuance/renewal and a full security header policy (HSTS, X-Frame-Options, X-Content-Type-Options, Referrer-Policy).
- Converted the application stack to systemd-managed services for automatic startup and crash recovery, eliminating manual process management and downtime from unhandled exceptions.
- Conducted a full-stack security audit and remediation pass: verified parameterized queries against SQL injection, implemented bcrypt password hashing and JWT-based authentication with expiration, added rate limiting on authentication endpoints, and patched a username-enumeration timing vulnerability in the login flow.
- Hardened host-level security via SSH key-based authentication (disabling password login) and a default-deny firewall (ufw) scoped to a private network overlay (Tailscale), reducing the server's public attack surface.
- Implemented automated nightly PostgreSQL backups with credential isolation and rotation, and maintained a secondary static deployment pipeline to GitHub Pages for redundancy.

Project FS — Security-Focused Web Application

agentred1999.github.io/project-FS | github.com/agentred1999/project-FS

- Designed and built a website with security as a first-class requirement, implementing measures to mitigate clickjacking, cross-site scripting (XSS), and other common attack vectors.
- Audited the application's attack surface prior to implementation, using findings to prioritize and scope specific hardening measures rather than applying generic best practices.

Technical Skills

Languages: TypeScript, JavaScript, HTML, CSS, Java, Python

Frameworks: React, Next.js, Redux, React Query, React Hook Form, TailwindCSS, Express, Firebase, Supabase

Infrastructure & Security: PostgreSQL, systemd, Caddy, Tailscale, Nginx-style reverse proxying, TLS/HTTPS, JWT auth, bcrypt, ufw firewall, SSH hardening, database backup automation

Tools & Platforms: Vercel, GitHub, Vite, Figma, VS Code, Jest, Stripe, React Testing Library, Raspberry Pi / Linux administration

Education

Hospitality Student | *August 2021 - December 2023*

Global Hospitality Leadership, Conrad N. Hilton College

Other

Interests: Meshtastic / off-grid mesh networking

Hobbies: Film photography and development

References: Provided upon request
